

## Free Argumentative Essay About Global Warming

Global warming is one of the most pressing issues facing the world today, and yet, sadly, it remains a largely overlooked problem among many populations. Over the past century or so, global temperatures have risen steadily as a result of human activities such as burning fossil fuels and industrial agriculture. This has led to an increase in greenhouse gas concentrations in the atmosphere, trapping heat and causing the world to become increasingly warmer. In fact, according to the Intergovernmental Panel on Climate Change (IPCC), “the period from 1983-2012 was likely the warmest 30-year period of the last 1400 years in the Northern Hemisphere.”

The effects of this warming are already being felt around the world. Glaciers are melting, sea levels are rising, and extreme weather events such as droughts and heat waves have become more frequent and intense. In addition to these direct effects, global warming is also having indirect impacts on human health, agriculture, water resources, and ecosystems. For example, rising temperatures can cause changes in air quality and the spread of infectious diseases.

Although some people may argue that global warming is not a problem that is worth worrying about, this could not be further from the truth. The long-term consequences of continued climate change are potentially catastrophic and should not be ignored. In order to prevent these effects from getting worse, it is essential for countries to take immediate action to reduce their emissions of greenhouse gases. This can be accomplished through a variety of strategies, such as decreasing the use of fossil fuels, developing renewable energy sources, and increasing efficiency in industrial processes.

In conclusion, global warming is an urgent problem that needs to be addressed now before it gets any worse. In order for us to protect our planet and ensure a sustainable future, it is essential that we take action to reduce our emissions of greenhouse gases and other pollutants. If we do not take steps now to address this issue, then we may be facing dire consequences in the future.
